

# Sanded Plywood

Coastal produces fully sanded AC, BB, and BC grade panels as defined in US Product Standard **PS1-09** for Construction and Industrial Plywood. These panels are recommended for use when structural integrity and appearance is important. All of Coastal's fully sanded panels are classified as **Exterior – Group 1 Species** with minimum C & better inner plies and they display the corresponding American Panel Association (APA) grademark. The glue bond classification of these grades is Exterior.

Note: Each of these sanded grades are available in Structural-1 specifications and grademark. Please contact the sales office for special orders.

Production Item	Performance Category	#Plys	Pcs/Unit	Construction Layup
